EDUCATION

Carleton University

Expected Graduation: May 2028

Honors Bachelor's Of Information Technology | IRM | Minor in Psychology

Ottawa, ON

- Relevant Coursework: Web Interface Development, Intro to Programming, Intermediate Programming, Database management, Data Visualization

EXPERIENCE

Ericsson

January 2026 - Present

Data Engineer Intern

Ottawa, ON

- Supported machine learning model development and deployment using **TensorFlow** and **PyTorch**, contributing to automated training workflows and experiment setup.
- Optimized Python data pipelines with **NumPy** and vectorization techniques to improve inference and preprocessing performance.
- Built interactive 3D telecom network visualizations for **Lund** and **Kista, Sweden** using **Python**, **Pandas**, and **TensorFlow** to support network analysis and reporting.
- Prepared and validated telecom datasets using **Python**, **Pandas**, and **NumPy**, improving data quality and supporting analyst workflows.

Ericsson

September 2025 - December 2025

Software Engineer Intern

Ottawa, ON

- Built and maintained **CI/CD** pipelines with **GitHub Actions** and **Jenkins**, improving release reliability and reducing manual release work.
- Troubleshoot issues across **GPU resources**, containerized services, and telecom software workflows, helping resolve build and deployment blockers.
- Supported **GPU-enabled compute environments** through configuration and performance tuning to improve resource efficiency.
- Developed **Python** automation scripts for build validation and environment checks, reducing repeated troubleshooting work.

LEADERSHIP

NoLife RP

Server Developer

- Led development and operations of a **GTA V FiveM** server with **100+ daily concurrent players** using **Lua**, **C#**, and **Node.js**, integrating **Stripe webhook-based subscription billing** that generated **\$3,500+ MRR**, maintained **99.9% uptime**, reduced manual admin effort by **80%**, and improved renewal success by **20%**.
- Built and maintained **custom gameplay systems**, **admin tools**, and **server-side automation** to improve player experience, streamline moderation workflows, and support stable daily operations.
- Designed backend integrations for **subscription renewals**, **cancellations**, and **payment failure handling**, reducing billing-related support work and improving service reliability.

PROJECTS

DataWhisk | *Python, PyTorch, BERT, Node.js, Playwright, Scikit-learn*

- Built a bakery sentiment analysis platform using **BERT**, **PyTorch**, and **Pandas**, with a **Node.js/Playwright** pipeline that collected **1,350+ customer reviews**, reducing manual data gathering by **50%+** and supporting **\$650/month** in ingredient savings.
- Trained and evaluated **NLP models** to classify customer feedback by **sentiment** and surface recurring product issues, enabling more targeted business decisions.
- Developed an **automated review ingestion and preprocessing workflow** that cleaned, structured, and prepared **web-scraped text data** for downstream machine learning analysis.

TECHNICAL SKILLS

Programming: Python, C, C++, C#, Lua, SQL, JavaScript, HTML/CSS

Tools/Framework: AWS (EC2, S3, DynamoDB), Django, Flask, JSON, GIT, Docker, NVIDIA Omniverse

Libraries/Frameworks: PyTorch, scikit-learn, Pandas, ReactJS, NextJS, NodeJS, Spring Boot, PostgreSQL
